Truth-Functional Logic

Hardegree, Metalogic, Truth-Functional Logic page 2 of 13 1 Introduction In presenting a logic, the customary procedure involves four steps (1) specify the syntax of the underlying formal language, \mathcal{L} , over which the logic is defined; (2) specify the semantics for \mathcal{L} , in virtue of which semantic entailment is defined; (3) specify a deductive system for \mathcal{L} , in virtue of which deductive

Candidate Indistinguishability Obfuscation and Functional ...

We give constructions for indistinguishability obfuscation and functional encryption that supports all polynomial-size circuits We accomplish this goal in three steps: We describe a candidate construction for indistinguishability obfuscation for NC1 circuits The security of this construction is based on a new algebraic hardness assumption

On Broken Symmetries and Classical Systems

1 Introduction Baker (2011) argues that broken symmetries play a crucial role in guiding our interpretation of quantum field theory Baker and others (Baker & Halvorson 2014, Earman 2003, Ruetsche 2011) approach the topic of symmetry breaking through the algebraic formalism, in which one
